Summary

Data Science graduate with practical **Python and SQL** experience in multi-source data processing, extraction, transformation, quality checks, and relational modeling. Applied data cleansing and validation to identify missing or inconsistent records, document processing steps, and support reliable analytical outputs. Seeking a **Data / ETL Test Engineer** role focused on data accuracy, completeness, integrity, and source-to-target validation.

Education

Rutgers University **Jan 2024 – Dec 2025**
Master's in Data Science (GPA: 4.0) *Camden, NJ*

Professional Experience

Safe Code Soft Technologies **Sep 2026 – Present**
Data Analyst and Project Coordinator (Remote) *Cedar Park, TX*

- Coordinate project workflows, timelines, and deliverables for data analytics and reporting initiatives.
- Extract, clean, and analyze datasets using **SQL and Python** to support business operations and decision-making.
- Develop and maintain automated reporting dashboards and KPI tracking metrics for cross-functional stakeholders.
- Document **data processing workflows**, analysis steps, and technical requirements to ensure data governance and consistency.

Intellistack Systems **Apr 2026 – Sep 2026**
Data Analyst and Project Coordinator (Volunteer - Remote) *Chandler, AZ*

- Assisted in collecting, cleaning, and organizing large datasets using **Python, SQL, and Excel** to support analytics workflows.
- Conducted exploratory data analysis to identify trends, performance patterns, and key business insights.
- Developed interactive dashboards and reports using Power BI to track key performance metrics and deliverables.
- Supported project planning by organizing tasks, establishing timelines, and tracking the progress of technical deliverables.

ACME GRADE **May 2022 – Jul 2022**
Data Science Intern *India*

- Extracted and transformed data using **SQL and Python** to support reporting and analytics workflows.
- Built and optimized SQL queries to improve data retrieval efficiency and reporting performance.
- Identified and **validated data sources** to ensure data accuracy and consistency in reporting outputs.
- Performed statistical analysis including regression, trend identification, and outlier detection.
- Developed reports and data visualizations to communicate insights and support business decision-making.

Data Science Experience

Retail Sales Performance & Profitability Analysis | *Power BI, Data Transformation, Data Modeling, DAX* – **GitHub Link**

- Analyzed **$45M+** sales data to identify revenue trends and performance gaps, developing dashboards across stores, districts, and product categories.
- Extracted and transformed data using **SQL queries** to support reporting and dashboard development.
- Designed scalable **star-schema data model** integrating multiple data sources for efficient reporting.
- Built KPI-driven metrics including sales variance, gross margin, and YoY performance tracking aligned with business requirements.
- Analyzed datasets to uncover trends, patterns, and performance insights across multiple dimensions.
- Enhanced and updated dashboards based on evolving business requirements and stakeholder feedback.

Global Food Security & Climate Risk Analysis | *Python, Pandas, NumPy, GeoSpatial* – **GitHub Link**

- Integrated **multi-source datasets** across **180+ countries** (1980–2023) to analyze large-scale trends.
- Engineered metrics to quantify food supply, affordability, and inequality.
- Identified **3 global food crisis** periods and showed methane-heavy economies experienced **25–40%** higher volatility.
- Performed trend analysis, **data validation and data cleansing** to support large-scale reporting insights.

EV Adoption & Air Pollution Impact Analysis | *Python, GeoPandas, Folium* – **GitHub Link**

- Analyzed EV adoption and pollution data across **58 California counties** to identify environmental trends.
- Integrated multiple datasets enabling large-scale geospatial analysis.
- Quantified up to **30% lower** pollution levels in high EV adoption regions.
- Developed dashboards and data visualizations to communicate insights and support decision-making.

Technical Skills

Languages: Python, SQL
SQL & Data Processing: SQL Queries, Query Optimization, Data Extraction, Transformation, Multi-source Integration
Data Quality & Testing Fundamentals: Data Validation, Null/Missing-Value Review, Data Cleansing, Consistency Checks
Reporting & Visualization: Power BI, DAX, Dashboard Development, KPI Verification, Data Visualization
Statistical Analysis: Regression, Trend Analysis, Outlier Detection
Data Modeling: Star Schema, Relational Data Modeling, Data Integrity, Data Governance
Tools: Git, Jupyter Notebook, Excel, Pandas, NumPy
Planned Technical Learning: Java, PyTest

Certifications

IBM Data Science Professional Certificate IBM / Coursera
